About us

We are pleased to introduce ourselves **as AIR SYSTEMS TRANZCEND**, which is one of the major **Air Conditioners solution** providers and **project Specialist Company** in this profession for more than **17 years**. The company executed various major prestigious projects **all over Kerala**. The company's executive staffs and technical experts jointly have already handled a vast range of projects including multi storied building group housing of public sector, Schools, Banks, Hotels, Hospital Industrial and commercial building.

TRANZCEND AIR SYSTEMS has a specialization in the **sales and service** of various national and international Brands like **MITSUBISHI ELECTRIC, GENERAL DAIKIN, CARRIER, MITSUBISHI HEAVY INDUSTRIES, TOSHIBA, PANASONIC**, Air conditioners. Our Innovative ideas and qualities are on par with international standard as we incorporate the **latest technologies** with Air Conditioning emphasizing quality comfort and **lower power consumption**. We have **fully fledged team** of qualified engineers and technical staff in the air conditioning divisions to meet all kind of requirement. Tranzcend Air Systems has consistently **Provide timely and high value services, competitively priced products without sacrificing quality**. TRANZCEND, continuous drive for improved energy efficiency has been its advanced inverter technology being applied to split, cassette, ducted, VRF and other systems. These systems provide a more **comfortable environment** and are more **energy efficient** when compared to non-inverter systems. When you buy a premium air conditioning system you need to look beyond the initial purchase price, its pays to consider on going running cost in conjunction with the potential life of the products.

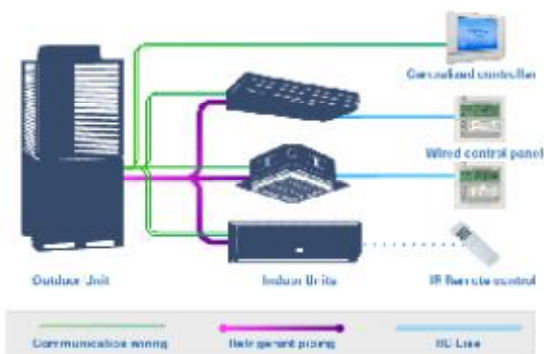

TRANZCEND offers **Superior Quality Product and Energy Efficient Reliability**, that's probably top of your list when buying an air conditioning system for your Home or Business. **TRANZCEND gives you Peace of mind, that's how confident, about the quality and reliability of these products.**

Our Products

Our Products

Quality first , Profit next

* VRF-VRV SYSTEM

VRF is characterized by the ability to connect multiple indoor units to one outdoor unit and control the indoor units individually. The outdoor unit uses an inverter-driven compressor and can change the refrigerant flow rate according to the indoor unit load. Since the capacity range of the indoor unit is wide, air-conditioning of even small spaces is possible. Also, indoor units can be individually started, stopped, and controlled to regulate temperature, thereby leading to energy saving.

* DUCTABLE

A ductable air conditioner is a split air conditioner in which conditioned air from the indoor unit is passed into the room using circular/oval/rectangular ducting. Ducting is fabricated either using galvanised steel or pre-insulated boards, or fabric

* CASSETTE TYPE

Cassette air conditioner is A ceiling mounted or suspended air conditioner, for when space is limited, because there is no available walls to mount a split system or where there is limited ceiling space for a ducted system.

* FLOOR STANDING

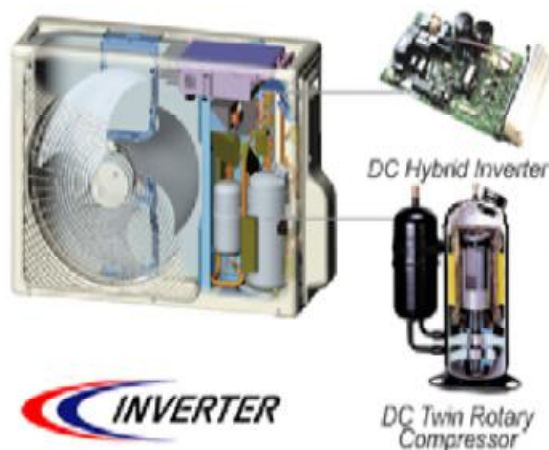

It's simply a compact air con unit that can be installed low on a wall, sitting just above the floor. They can also be mounted in a recessed or semi-recessed space and even directly under a window frame. Cold air is distributed from vents on either the top or the bottom of the unit, or a combination of both

* HI-WALL SPLIT UNIT

High Wall AC is a wall mounted air conditioner. It is commonly known as Split air conditioner. Split air conditioner is divided into two parts indoor unit and outdoor unit.

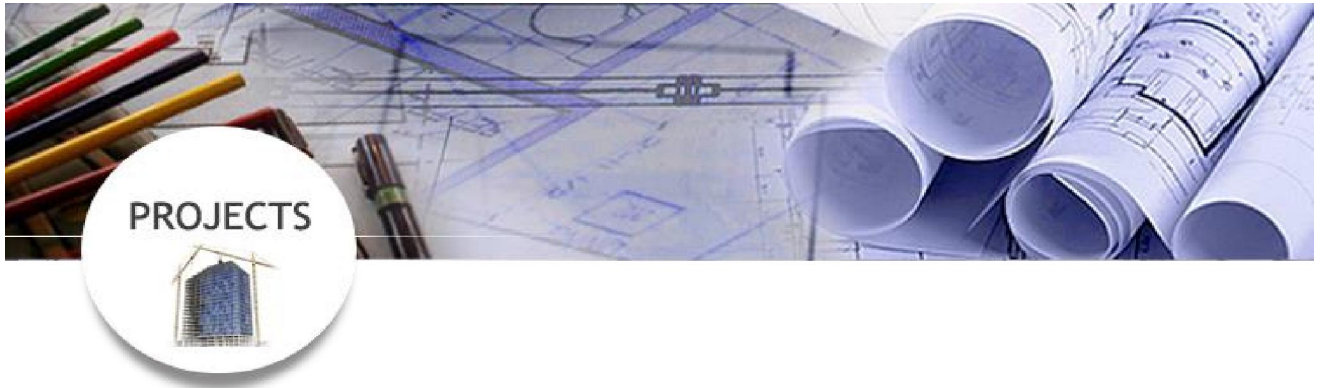

* ALL TYPE OF INVERTER A/C

An inverter type air-conditioner adjusts the speed of the compressor to control the refrigerant (gas) flow rate, thereby consuming less current and power. An inverter has precise temperature control and as the set temperature is attained, the unit adjusts its capacity to eliminate any temperature fluctuations.

In contrast, non-inverter airconditioners have a fixed cooling/ heating capacity and can only control the indoor temperature by starting or stopping their compressors.

Non-inverter air-conditioners stops and starts repeatedly. The power consumption and current goes down when the operation stops, but it goes up sharply at the time of restart and thus it has high average power consumption and temperature variations. As a result, inverter airconditioners are more energy-saving and comfortable than non-inverter air-conditioners.

***DUCTABLE PROJECTS**

Sl.No	Project	TR /HP	Machine	Contact person
1	SNG Eng.College, Kolenchery	265	CARRIER	Mr.George
2	Athira Jewelry High Court ,Ernakulam	176		Mr. Godwin
